

NCG CAM Solutions Ltd are pleased to release NCG CAM v15.0.07

This point release includes minor fixes we have made since v15.0.06.

Please note that NCG CAM v15.0 will not install on Window XP, or on a 32 bit operating system. Windows 7, 64 bit, Windows 8 / 8.1 64 bit or Windows 10 64 bit are all supported operating systems.

V15.0.07

5299 : Tool Database : Loaded tool databases with missing catalogues are now usable, instead of being locked (which was done in ticket 5152). But there will still be something in the tool database pointing to another tool database that does not exist
Also, a tool database can no longer be deleted using the options menu if any other libraries depend upon it.

5301 : Shaft Profile Analysis: Fixed problems with analysis for tapered cutters.

5316 : Shaft Profile: It is now possible to increase the flute length of tapered cutters

5328 : Machine simulation : A Patch to fix (MW SUP-18782) a problem where an error message could be thrown occasionally in the Machine Simulator has been applied.

Updated the German and Turkish translations.
